Here are 7 very good keywords to use. All results are based on actual search terms related to your niche. If a term you like or think is good and does NOT appear here, it's because of low-monthly-search-volume or high-competition-levels. Multiple selection criteria with **NEW CROSS VERIFICATION OF TOP RESULTS** have been used to find them. All have extremely low competition levels and, with proper on-page and off-page SEO, you can rank for any of them.

imposter syndrome test

Volume: 9,900/mo | CPC: \$1.69 | Competition: 0.01 |  ★

My first choice for you as a primary keyword for your outsourcing page – if content applicable - would be "**imposter syndrome test**" because of relevance, volume, and lowest competition across all metrics. A top-ranked web-page for this keyword could only get up to **4,178 hits/mo.**

I would also create more sub-pages with titles equivalent to other keywords on the list you like and SEO each one for each keyword. Done properly – with more top-ranked pages - can increase your total hits per month.
